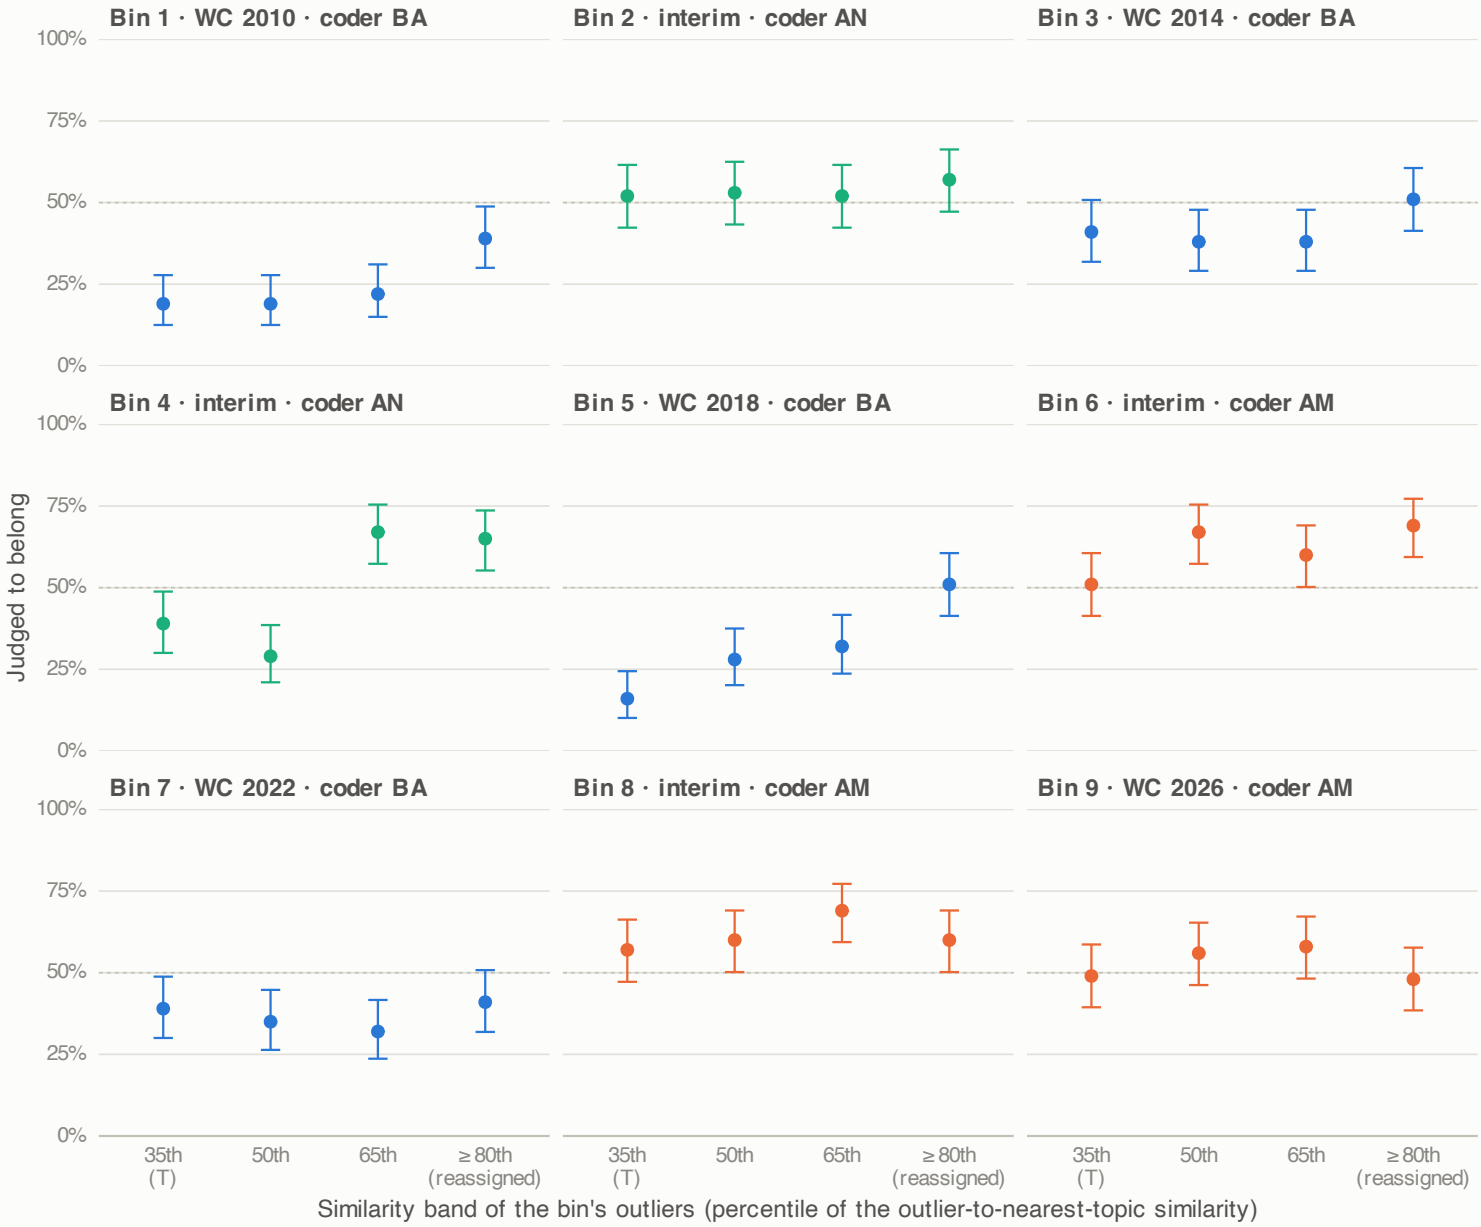
Share of admitted outlier posts judged to belong to their topic, by similarity band and bin

100 posts per band and bin, 95 % Wilson intervals; dashed line = 50 %.
Pooled, every judgement counting once: dual tier 43.6 %, reassigned tier 53.4 %, all admitted 46.1 %.



Decision D9 admits raw HDBSCAN outliers at or above the 35th percentile (35th–80th: dual, with a second topic; ≥ 80th: singly reassigned). One coder per bin (BA: bins 1, 3, 5, 7; AM: 6, 8, 9; AN: 2, 4), so bin and coder differences cannot be separated. code/15-outlier-calibration.R; decisions K1–K7, docs/session-11_2026-10-30/.
